

July 4 - July 10, 2003

<P>The Terra spacecraft is in nominal mode. All instruments are in Science Mode.</P>

<P>A Command Authorization Meeting (CAM) and final Go-CAM for the first in series of three

Inclination Adjust maneuvers were held on July 2 and July 7, respectively. The Inclination

Adjust maneuver originally targeted for July 8 was postponed because of inadequate scheduled

TDRSS time for the maneuver contact, due to loss of a portion of the critical maneuver contact

to a higher priority TDRSS user spacecraft. The maneuver was rescheduled for July 10 but was

waived-off because of ground equipment reboot at White Sands which would have required a

reconfiguration at the EOS Operations Center a time which was deemed to be too close to the

actual maneuver start time. The maneuver will be re-planned next week in coordination with

a planned Drag Make-up maneuver on July 16 and a MODIS lunar calibration roll maneuver on

July 17.</P>

<P>

Plans

 Conduct first in a series of three inclination adjust maneuvers;

 Conduct Drag Make-up maneuver;

 Conduct MODIS lunar calibration roll maneuver on July 17; and

 Begin preliminary planning for potential 3rd Deep Space Calibration Maneuver in October/November time frame.
